Specimen

File: blister-upper.jpg
Size: 123.0 KB · 600 × 480 px · JPEG

Diagnostic result

Blister Blight

Exobasidium vexans Massee
Code: INF-9821

Model-reported confidence: 79.3% (this specimen — not held-out test accuracy of 92.55%).

Four-class probability (server output)

- Blister Blight: 79.3%
- Healthy: 10.8%
- Grey Blight: 9.9%
- Red Rust: 0.0%

Result summary

Lesion patterns consistent with early blister blight on the adaxial leaf surface. Confirm with field scouting before treatment.

Suggested next steps

1. Isolate affected rows and log block ID in the supervisor queue.
2. Schedule copper-based protective spray within 24 hours if field conditions match.
3. Re-scout after the next cool, damp night cycle.

Disclaimer: Model-reported confidence reflects this inference only. Held-out test accuracy is a separate training metric and is not a guarantee for field specimens. Follow local agronomic guidance before treatment decisions.
